Study information

Scientific Title

Phase I dose-escalation study of oral administration of MET Tyrosine Kinase Inhibitor S 49076 in patients with advanced solid tumours

Study hypothesis

To establish the safety profile and the recommended dose of S 49076 with the selected treatment schedule.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval was obtained before recruitment of the first participants

Study design

International multicentric non-randomised open-label dose escalation Phase I study

Primary study design

Interventional

Secondary study design

Non randomised study

Study setting(s)

Other

Study type(s)

Treatment

Participant information sheet

Not available in web format, please use the contact details to request a patient information sheet

Condition

Advanced solid tumours

Interventions

Capsules containing 7.5 mg and 30 mg of S 49076 administered orally. Treatment duration is at the discretion of the investigator

Intervention Type

Drug

Phase

Phase I

Drug/device/biological/vaccine name(s)

S 49076

Primary outcome measure

1. Dose limiting toxicity (DLT) and maximum tolerated dose (MTD) at the end of the cycle 1, measured by AE
2. Safety profile at each visit, measured by AE monitoring

Secondary outcome measures

1. Pharmacokinetic evaluation within cycles 1 and 2: blood samples
2. Pharmacodynamic evaluation at each cycle: blood samples
3. Tumour response evaluation every two cycles: imagery

Overall study start date

13/02/2012

Overall study end date

15/09/2014

Eligibility

Participant inclusion criteria

1. Male or female patient aged 18 years or older
2. Advanced solid tumour that has relapsed or is refractory to standard therapy or for which no effective standard therapy is available
3. Ability to swallow oral capsule(s)
4. Estimated life expectancy of more than 12 weeks
5. ECOG performance status less than or equal to 1
6. Adequate haematological, renal and hepatic functions

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

110

Participant exclusion criteria

1. Major surgery within 4 weeks prior to the first day of the study drug administration
2. Chemotherapy within 3 weeks prior to the first day of the study drug administration (6 weeks in the case of treatment with nitroso-ureas)
3. Any other prior therapy involving an agent directed to the solid tumours within five times of the half-life of said agent but not less than 3 weeks prior to the first day of study drug administration
4. Hormonal therapy directed to the solid tumours within 2 weeks prior to the first day of study drug administration (6 weeks in the case of treatment with bicalutamide), except in the case of

LHRH agonist therapy for prostate cancer which is permitted.

5. Radiotherapy within 4 weeks prior to the first day of the study drug administration (within 1 week in the case of palliative radiotherapy at localised lesions)

6. Cumulative radiation therapy involving more than 25% of the total bone marrow

7. Concomitant uncontrolled infection or severe systemic disease (at the discretion of the investigator)

8. Known organ dysfunction which would either compromise the patient's safety or interfere with the evaluation of the study drug safety

9. Patients with impaired cardiac function

Recruitment start date
