Study information

Scientific Title

Randomised clinical trial testing a one week course of curative whole breast radiotherapy against a standard three week schedule in terms of local cancer control and late adverse effects in patients with early breast cancer

Acronym

FAST-Forward

Study hypothesis

To identify a 5-fraction schedule of curative radiotherapy delivered in one week that is at least as effective and safe as the UK standard 15-fraction regimen after primary surgery for early breast cancer.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved 02/09/2011, NRES Committee South East Coast - Kent (now London - Brighton and Sussex REC, Ground Floor, Skipton House, 80 London Road, London, SE1 6LH, UK; +44 (0)207 104 8241; brightonandsussex.rec@hra.nhs.uk), REC ref: 11-LO-0958

Study design

Phase III randomized controlled multi centre trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Condition

Breast cancer

Interventions

Patients will be randomised equally between a standard 3-week schedule and two 1 week test schedules of whole breast radiotherapy

Whole breast radiotherapy schedules:

Standard group - 40 Gy in 15 fractions over 15 days (not weekends)

Test group 1 - 27 Gy in 5 fractions over 5 days (not weekends)

Test group 2 - 26 Gy in 5 fractions over 5 days (not weekends)

Patients will be followed up for a minimum of 10 years.

There are Quality of Life and a photographic sub-studies, each with 2196 patients. Quality of Life questionnaires will be completed at baseline, 6, months and 2, 5 and 10 years post randomisation. Photographs will be taken at baseline and 2, 5 and 10 years post randomisation.

Intervention Type

Other

Phase

Phase III

Primary outcome measure

Ipsilateral local tumour control: Will be reported at the annual follow up visits. The tests will be performed when the need arises i.e. when the patient feels unwell or reports another lump etc. The tests will be carried out as routine clinical examinations i.e. X rays, computerised tomography (CT) scans, magnetic resonance imaging (MRI), ultrasound.

Secondary outcome measures

1. Early and late adverse effects in normal tissues
2. Quality of life at baseline, 6, months and 2, 5 and 10 years post randomisation
3. Contralateral primary tumours, regional and distant metastases
4. Survival

Overall study start date

01/09/2011

Overall study end date

02/10/2028

Eligibility

Participant inclusion criteria

1. Age more than or equal to 18 years
2. Female or male
3. Invasive carcinoma of the breast
4. Breast conservation surgery or mastectomy (reconstruction allowed but not with implant. Tissue expanders with distant metal ports are allowed)
5. Axillary staging and/or dissection
6. Complete microscopic excision of primary tumour
7. Stage pT1-3 pN0-1 M0 disease

- 8. Written informed consent
- 9. Able to comply with follow up

Concurrent trastuzumab and hormone therapy is allowed

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

4600

Total final enrolment

4579

Participant exclusion criteria

1. Past history of malignancy except basal cell skin cancer and cervical intraepithelial neoplasia (CIN) or non-breast malignancy allowed if treated with curative intent and at least 5 years disease free
2. Contralateral breast cancer, including ductal carcinoma in-situ (DCIS), irrespective of date of diagnosis
3. Breast reconstruction using implants
4. Concurrent cytotoxic chemotherapy (sequential neoadjuvant or adjuvant cytotoxic therapy allowed)
5. Radiotherapy to any regional lymph node areas (excepting lower axilla included in standard tangential fields to breast/chest wall)

Recruitment start date
