Plain English Summary

Background and study aims

The Mental Health Commission of Canada is working with a national and five local research teams in Vancouver, Winnipeg, Toronto, Montreal and Moncton to conduct this study. The aims are to find out what kind of housing and support work best for people who are homeless and have mental health issues and to influence the government to create more long-term community-based housing and supports.

Who can participate?

Homeless or precariously housed adults aged 18 and older diagnosed with a serious mental disorder.

What does the study involve?

To find out which kind of supported housing works best, we are comparing people receiving Housing First with those in usual care. This means that those who agree to participate will be assigned at random to receive either Housing First (rent supplements and mental health supports from a case manager at one of two levels, assertive community treatment or intensive case management) or usual care (existing community services). All participants will be interviewed every 3 months over a period of two years and be asked to continue in a longer-term 4 year follow-up study. We ask participants to provide us with access to information about their use of health services, income assistance and any contacts with the justice system.

What are the possible benefits and risks of participating?

All participants get a cash honorarium (payment) for each interview. We make the interview as comfortable as possible to reduce the risk of personal questions creating distress. Those in the Housing First groups get supported housing through the study and have access to a minimum level of support and additional treatment if they choose to use it. Rent stipends and case management supports will be provided for the duration of the study when we will try to make sure that their housing is maintained. If they lose the housing for any reason, we will help them find another place to live and either continue to provide services/supports or locate alternative

sources in the community. There is an equal chance that participants who agree to be in the study will not receive housing through the study. For those who do not get supported housing through the study, we let them know about housing and support through other sources.

Where is the study run from?

Centre for Addiction and Mental Health (Canada).

When is the study starting and how long is it expected to run for?

September 2009 to April 2013.

Who is funding the study?

Health Canada.

Who is the main contact?

Dr Paula Goering

paula_goering@camh.net

Study information

Scientific Title

Multi-site pragmatic randomised controlled field trial of Housing First versus treatment as usual in mental health and homelessness

Study hypothesis

What is the effectiveness, cost/benefit, and cost/effectiveness of Housing First in comparison to care as usual for homeless adults?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Centre for Addiction and Mental Health Research Ethics Board, 21/09/2009, ref: 252/2009

Study design

Multi-method multi-site unblinded randomised controlled field trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Treatment

Participant information sheet

Not available in web format, please use the contact details to request a patient information sheet

Condition

Homelessness and serious mental illness

Interventions

Treatment: provision of rent supplements and case management or assertive community treatment for the duration of the study

Comparison: care as usual

Duration of intervention: Data collection will be ongoing from Sept 2009 to Feb 2013 with duration of intervention from 24 to 42 months.

Duration of follow-up: 2 years.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Housing stability, measured using the Tsemberis Residential Timeline Follow-back Inventory at 6, 12, 18 and 24 months

Secondary outcome measures

Quality of life, measured using the EQ-5D at 6, 12, 18 and 24 months

Overall study start date

01/09/2009

Overall study end date

01/04/2013

Eligibility**Participant inclusion criteria**

1. Legal adult status
2. Absolute homelessness or precariously housed
3. Presence of a serious mental disorder
4. Aged 18 years and older, either sex

Results and Publications

Publication and dissemination plan

A publications policy and plan, developed by a committee representing the project stakeholders, defined a set of core papers that will be written using the data from all sites. These include a paper describing the study methods as well as papers on how the Housing First programs were implemented and how well they worked at each level at one and two years. A process for coordinating author-initiated papers on a number of related topics is also in place. In addition, each site has a specific publication plan for their local papers.

Reports for policy and public audiences created throughout the project can be accessed at <http://mentalhealthcommission.ca/English/initiatives-and-projects/home>

A National Film Board interactive documentary is at <http://athome.nfb.ca/#/athome>

Post project dissemination has included an interactive toolkit found at <http://housingfirsttoolkit.ca>

Data is stored at St. Michael's Hospital in Toronto and is available to external investigators who sign a Data Sharing and Use Agreement that stipulates the responsibilities associated with transfer of datasets. Dr. Carol Adair is the data access coordinator.
