ISRCTN57852484 https://doi.org/10.1186/ISRCTN57852484

A pragmatic randomised controlled trial to test the efficacy of nortriptyline plus nicotine replacement therapy (NRT) versus a placebo plus NRT in helping smokers to stop and testing the role of noradrenergic and dopaminergic genetic variants in smoking cessation

Submission date

Study information

Scientific Title

Acronym
SCANAG - Smoking Cessation and Nortriptyline and Genetics

Study hypothesis
1. To show whether nortriptyline plus NRT is more effective than NRT alone in smoking cessation
2. To explore whether allelic variants coding for components of the noradrenergic pathways interact with pharmacological treatment and are related to withdrawal severity and successful quitting
3. To test a previous exploratory finding that allelic variants coding for components of the dopaminergic pathways interact with NRT to predict quitting success

Ethics approval required
Old ethics approval format

Ethics approval(s)
Ethics approval received from the local medical ethics committee (ref: MREC/03/7/053).

Study design
Randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Not specified

Study type(s)
Treatment

Participant information sheet

Condition
Smoking cessation

Interventions
NRT plus nortriptyline/placebo.

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Nortriptyline and nicotine replacement therapy (NRT)

Primary outcome measure
Six months of continuous abstinence biochemically confirmed.

Secondary outcome measures
1. Seven-day point prevalence
2. Twelve-month continuous abstinence

Overall study start date
01/08/2003

Overall study end date
31/07/2005

Eligibility

Participant inclusion criteria
1. Smoked at least 10 cigarettes per day on average over the past year.
2. Want to quit
3. Prepared to use NRT and the trial drug
4. Using an NHS stop smoking service

Participant type(s)
Patient

Age group
Adult

Sex
Both

Target number of participants
900

Participant exclusion criteria
1. Pregnant or breast feeding or planning to do so in the next 3 months
2. Not clinically suitable to use NRT according to data sheet
3. Not clinically suitable to use nortriptyline according to data sheet

Recruitment start date
01/08/2003

Recruitment end date
31/07/2005
